

Opening Market Opportunities for Clean Air Technologies

Credibility

Innovation

Growth

The Institute of Clean Air Companies

The Institute of Clean Air Companies (ICAC) represents the nation's leading providers of proven emission-control technologies for stationary sources. As the unified voice of the clean air technology sector, ICAC brings credible technical expertise to policymakers and industry partners—helping to support environmental policies that are effective, achievable, and supportive of continued economic growth.

For more than six decades, ICAC and its members have helped the United States cut emissions of major pollutants even as the economy has expanded, demonstrating that clean air progress and industrial competitiveness go hand in hand. This history of advancing economic development while safeguarding air quality uniquely positions ICAC to help inform today's policy decisions and guide tomorrow's investments, ensuring that environmental and economic success continue to move forward together.

Join your fellow emissions management technology leaders in delivering clean air.

ICAC Members are Active in:

- Data Center Emissions
- Industrial Sector Emissions
- Power Sector Emissions
- Emissions Measurement & Monitoring
- PFAS
- CCUS
- NOx
- Methane Reduction
- VOCs
- Particulate Matter
- Hydrogen

See a full list of ICAC member technologies and services on the ICAC website.

How Do ICAC Members Support Government and Private Industry?

The need for pollution control is always present. As legacy industries evolve, and new sectors like data centers emerge, it is essential that decision makers stay on top of the latest technology.

Reducing air pollutants fosters industrial competitiveness, allowing wider access to global markets. **Smart emissions management helps companies make smart investments.**

Technology Identification

Connecting decision makers with available technology

ICAC works with government agencies and stakeholders to identify, evaluate, and better understand available clean-air technologies. By filling long-standing gaps in technology awareness, ICAC provides targeted tools and engagement opportunities that help stakeholders make more informed, effective decisions.

Industry-Focused Webinars

Staying ahead of trends and emerging technology needs

As providers of emission-control technologies, ICAC members often engage early with project developers to offer critical technical perspectives for emerging industries (like data centers and PFAS mitigation). We also host regular webinars that spotlight new technologies and highlight how ICAC supports evolving markets and innovation in almost every industrial sector.

Engagement Opportunities

Amplifying and strengthening the voice of the clean air industry

ICAC and its members engage with stakeholders through a range of activities. This includes regular EPA roundtables; technology briefings and dialogues with DOE, CARB, and Commerce; and ongoing outreach to policymakers, industrial consumers, and other associations.
